

IRB shortcut procedure at the University of Innsbruck

The IRB shortcut procedure at the University of Innsbruck applies to 'standard laboratory experiments', which are defined as follows:

1. No deception involved
2. Voluntary participation
3. No physical risks
4. No measurements of physical state (e.g., saliva samples, blood samples)
5. Clear information for subjects regarding duration, repetition, interactions and what is common information to subjects
6. Random procedures are clearly explained to participants
7. Anonymity regarding who is interacting with whom during the experiment
8. Paying at least the opportunity cost of time, and avoid negative payments (losses)
9. Confidentiality of payments
10. Anonymous experimental data kept separate from non-anonymous payments data
